

HydroKlenze

Biological Wastewater Treatment

HydroKlenze™ systems are designed to process all the wastewater from single dwellings in rural or countryside areas. The HydroKlenze system was successfully tested in accordance with the EN harmonised EN 12566 Part 3 (Small Wastewater Treatment Systems), obtaining CE Mark status permitting its installation in any EU State. The standard format of the HydroKlenze system is the HydroFlo™ Aeration Treatment Unit.

Concrete Built is Better Built

Cattle Slats

Our Safety Meshable Slats are designed to simplify the agitating of slurry and emptying of the tank, and are available in standard or wide slat form. The meshable opening is located towards the end of the slat length and consists of a bolt-dipped galvanneal steel frame (150mm x 825mm) embedded into the concrete. A safety gate of galvanneal steel fits, with 3 heavy duty chequer plate galvanneal steel ribs covers the opening. Harrington meshable slat gates can be locked and are safe for both forward and pedestrian traffic.

Product Description	Load Class	Ribs	Slat Length (mm)	Width (mm)	Depth (mm)	Slat Type	Concrete (m ²)
1.5/30/0196* Meshable Slat	A3	7	40	1200	180	Heavy Duty	50

Company

Company Home

About Us

The Harrington Concrete & Quarries and Harrington Concrete (Sligo) group is one of the largest independent manufacturers of concrete and quarry stone products in the Republic of Ireland.

It is a family run company, formerly known as Frank Harrington Ltd, with experience in the sand and gravel business for over 50 years. The head office was first established in 1971 at Killybeggy, County Mayo, and has grown to incorporate concrete production facilities in Castlebar, Clangway and Bellefleur, which now employs over 330 people.

For the building and construction industry Harrington Concrete also produces a wide range of high quality precast concrete products such as: standard and high strength concrete blocks, drainage pipes, fencing systems, traffic management bollards, manhole rings and slabs.

For the agricultural sector the company produces specialist precast concrete cattle slats, beams and manholes, and provides certified processed agricultural lime to improve soil pH and drainage.

Harrington concrete produces and supplies certified ready-mix concrete (RMC) in a wide range of classes

Welcome to Gilmartins.com
Gilmartins have been trading in Kiltmogh since 1924 as a wholesale and distribution company to the catering and retail trade.
In March 2006 Gilmartins moved to a new 18,000 square foot, purpose-built, combined showroom and warehouse facility on the Bonita Road, Kiltmogh.
We pride ourselves on providing a first-class service to all our customers, and also provide a weekly delivery service and next day delivery on demand.
We now boast the largest catering showroom and warehouse in the west of Ireland, out of which we provide first class service to our customers nationwide.
At Gilmartins we stock over 3000 catering and hygiene products, supplying hotels, restaurants, pubs, schools, day-care centres, factories, offices and shops.

ABOUT US MILKING SYSTEMS CONTROL SYSTEMS WASH SYSTEMS FEEDERS & SCRAPERS STALLING GATES

ABOUT US

MilkTech Ltd. provides essential support to the dairy farmer with the supply and fitting of milking machines and dairy farm equipment, servicing and maintenance, and an emergency breakdown repair call-out service.

Headed by John Lynn, a Broomfield qualified and IMCCO certified technician, MilkTech has been the main Broomfield Design/Mechanics Agent in Mayo for the past ten years, which has now expanded to the entire Connaught region to include Sligo, Mayo, Roscommon and Leitrim.

The main aims of the business are:

- To ensure efficiency and create higher yields for the dairy farmer through automation and technology.
- To make the milking, washing and feeding processes less labor intensive for the farmer in a single person operation.
- To ensure cost containment, SCC, Control Call Circuit levels, TBC (Total Bacterial Count) levels, and prevent disease and infection.

Dairy Parlour Equipment Supplied & Fitted
MilkTech can supply and fit all the dairy farm equipment that your parlour requires. Factors to meet your needs for any size operation. As the main agent for Broomfield Design/Mechanics, all equipment and parts are supplied to MilkTech, who can provide ongoing after sales support and a full warranty on parts.

24hr Emergency Breakdown Call-Out
MilkTech offers a 24 hour emergency breakdown repair service to all types of milking machines and dairy farm equipment across counties: Mayo, Sligo, Galway, Roscommon and Leitrim.

The main priority for an IMCCO certified technician is to keep your milking machine going and/or any other production. Call-out is available 24/7 even at night, with reduced rates for long term customers.

Installation, Maintenance & Service
In addition to Broomfield Design/Mechanics equipment, MilkTech is able to provide installation, maintenance and service for all types of milking machines, control and wash systems, feeding systems and hydraulic scrapers.

Maintenance and service contracts are available to prevent unexpected breakdowns, and to save money by removing the need for costly emergency breakdown repair call-outs. To maintain good call-out rates it is recommended that services are completed twice a year, with minimum service intervals of six months. MilkTech provides the very best electrical and machine parts, with full written reports on your milking machine to IMCCO standards.

If you are a farmer who is suffering with call-out problems or TBC (Total Bacterial Count) issues we can also provide a full consultation and advice service.

ELECTRO MECHANICAL AGRI

ABOUT US MILKING SYSTEMS CONTROL SYSTEMS WASH SYSTEMS FEEDERS & SCRAPERS STALLING GATES

WASH SYSTEMS

Teat Spray Units

To reduce cross contamination and SCC (Somatic Cell Count) levels, MilkTech recommends the use of quality teat spray units. These units are used to spray an antibacterial chemical to clean the teat pre-milking, to clean off all types of milking machines, control and wash systems, feeding systems and hydraulic scrapers.

Automatic teat sprayers may be used which are powered by compressed air, and have an spray wand extending the parlour or entry deck.

Cluster Flush Systems
MilkTech can add cluster flush systems to any milking machine to wash the cluster after milking, and is the most effective way of washing the milking unit.

The right flowable, jetter system has a unique design which enables cluster washing to be done just by lifting the cluster on top of the jetter. The jetter is self-cleaning and almost maintenance free. The boost system is also available as a full-up and down system, which means mounting the cluster for washing is much easier.

Aquastar Water Management System

Make life easier and save time spent in the parlour with the Aquastar automatic milking machine washer. Reduce your TBC (Total Bacterial Count) levels with our own unique boiler system providing 85°C water.

- Environmentally friendly wash system - programmable to suit each dairy farm.
- Flexibility of recycling off wash water.
- Adjustable times and volume of water per wash cycle.
- Automatic draining of chemicals.

Volume Washers & Pressure Washers
Wash down your parlour with ease with a high volume pressure washer and pump. The volume washer system is a professional water system supplied to the parlour, which provides hot air cleaning during milking keeping the jet line more hygienic. As they have their own pressure pump, volume washers system can also be connected to a recirculate collection reservoir for the more efficient use of water.

Target areas localised areas with portable heavy duty pressure washers supplied by MilkTech, more economical than the parlour cleaning, which washs less water but maintains hygiene and helps to reduce cross contamination and prevent disease.

ELECTRO MECHANICAL AGRI

ABOUT US MILKING SYSTEMS CONTROL SYSTEMS WASH SYSTEMS FEEDERS & SCRAPERS STALLING GATES

GATES

Compressed Air Gates

MilkTech offers two types of air/gate, compressed or galvanneal electric gates and compressed air/gate. Both types are simple and easy to operate. The compressed air/gate moves vertically straight up and down, which is a simple and safe option allowing the animal to get caught or trapped in the swing, and takes up less room in the parlour lane.

Compressed air/gate allow the cow traffic to pass through the parlour quickly and easily, and make it easier to separate the cows as required.

Both types are electrically controlled, but can also be operated manually from any place within the operators pit by means of a push pull rod system down the pit.

Selection Gates

Automate your parlour and reduce man hours with Cow Identification or manual selection gates. The Broomfield Design/Mechanics cow selection gate comes with a two way stand alone or three way IMCCO connected option which allows the farmer to select a cow from the operators pit without ever leaving it.

There is no longer any need to look for help when separating cows in rear or side cow, or selecting cows to look by moving the process a cow one pit.

Automatic Baling
For greater control in the handling of individual cows in the parlour, MilkTech can supply a fully automatic baling system just for your parlour layout. Ensure the operator's safety and the safety of the cow without leaving stress to the animal. Available in manual or compressed air options.

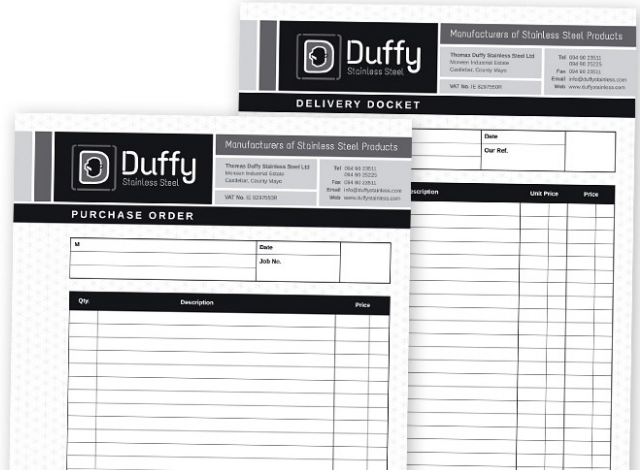

FOR 24 HOUR EMERGENCY BREAKDOWN REPAIR IN COUNTY MAYO, SLIGO, ROSCOMMON, GALWAY AND LETRIM CALL JOHN LYNN ON 087 205 4103

Firex

ESCAPE SYSTEMS

Fire prevention

- Do not plug too many appliances into an electrical outlet, stove and fireplaces.
- Never smoke in bed or soft furniture.
- Do not use damaged or frayed electrical cords or extension cords.
- Keep matches and lighters out of the reach of children.
- Teach your children about the dangers of playing equipment.
- Never use extension cords with heating or air conditioning equipment.
- Purchase smoke alarms and fire extinguishers for each floor of your home.
- Have an Emergency Escape Plan and practice it frequently.
- Ensure that you have tools available if windows must be broken.
- If you live in a two-story home, you should have an escape ladder for each occupied bedroom.

Please note, that your anticipated escape route, for example up a bay window or similar, might well be blocked if the room below.

To guard against small fires or to keep a small fire from developing into a big one, every home should be equipped with fire extinguishers. Because almost all fires are small at first, they might be contained if a fire extinguisher is handy and used properly. You should take care, however, to select the right kind of fire extinguisher, because there are different ones for different kinds of fires. Install fire extinguishers on every level of the home and include the kitchen, ground floor and garage.

Fire Statistics
Provisional figures indicate that nearly 100 people were killed in domestic fires over the past two years. Over half of these fatal fires occurred at night time - either the living room or bedroom. Makes over the age of 65 remain the group most at risk.

What to do in case of fire

Often, when a fire breaks out, confusion and errors follow. If you have a well-practiced fire evacuation drill you will be better able to deal with an emergency situation. A rehearsed fire escape drill can make all the difference.

Preparation

- Have at least two exits from every room in your home. Invest in fire escape ladders for upstairs bedrooms.
- Decide on one meeting point outside the house.
- The stairs are the primary escape route - keep them clear.
- The stairs are the primary escape route - keep them clear.
- Always make sure that your main escape route is clear and easy to use. For example, make sure your door is easy to open and if you need to rely on a window, be certain you can open it.
- Teach your family that in a fire they must stay low to the floor to avoid smoke.
- Test family members to feel any closed door on the exit route before opening. If the door is warm, open it slowly, and close it quickly if heat or smoke rushes in.
- Practice the plan until perfect.

In an emergency

- In the event of fire, do not stop to get dressed or gather valuables. Seconds count - do not search for the family pet.
- Close all doors behind you as you leave.
- Warn other residents by knocking on their door as you pass.
- Move quickly to get outside the building without using lifts.
- Do not re-enter the building for any reason.
- If your clothes catch fire, stop, drop and roll.
- Phone the fire brigade from a nearby phone.
- If you are staying with young children, the parent to which the children are most attached to, should lead the way, as children will be more likely to follow.

Firex ESCAPE SYSTEMS

The FIREX Escape System is a product of Beaumont Engineering. The actual product may differ slightly from the specifications described in this leaflet, whilst maintaining the same high standard expected from Beaumont Engineering.

Contact James Carley
Beaumont Engineering, Charlswort, County Mayo, Eire.
Tel: 084 9255922. Fax: 087 2730337
Email: info@firexescape.com

Fire safety is extremely important. Every year approximately 50 people die from uncontrollable fire outbreaks - mostly in and over 60. Through its fire safety education and awareness programmes the National Safety Council aims to remind us to think constructively about fire safety, particularly in winter when most fire tragedies occur.

However, safety is not an issue that comes to our minds very often, as we go about our daily routine. Yet, in our homes, there may be dangers that can take lives and destroy our properties.

Prevention is the key but in the knowledge that all fires will not be prevented it is essential that every household has an effective system to detect fire as a simple task. The earlier a fire is detected, the less risk there is to your life, fire alarms and smoke detectors play a very important role in this.

The most obvious way out may be blocked by fire or smoke, and toxic, taking any vision, so, if a downstairs room is on fire, a window will usually be the only way out of a room upstairs.

Very rapid and easy deployment, allows access with a push of a locking pin

Pushes out into a 12" long, 16" wide ladder with 12 bars and a section rings and a 50" safety rail

Operating Instructions
In an emergency, remove top locking pin from its location and the depth of the ladder allows the lower sections to fall out towards the ground. It is essential to mount the ladder that at any point you maintain a firm grip on the ladder with at least one hand.

To Reset The Ladder
Lift the lower movable section up until you are able to slide the locking pin to place at the top of the ladder.

For Proper Maintenance
The ladder should be operated once every 6 months. Regular lubrication and ensure smooth operation.

Easy to install, disassemble and store. Fits in a standard window.

Unobstructed access to the window sill.

Fixed installation - permanently installed

Suitable for standard windows

Weather proof

Rigid, permanent fixing, means easier use for infants or elderly

Electro-polished 1.5mm 304RHS stainless steel construction
